

# 13:10

## Friday 12th January

was the day that **Maureen** was able to control her home through her iPhone. Young at heart, Maureen had always led an independent lifestyle. However, with her health deteriorating and her mobility affected by her arthritis, Maureen turned to Steeper to help with making her home life that bit easier. Soon after her assessment with a Steeper engineer, Maureen was able to fully control her home through her iPhone. Switching the lights on and off remotely, meant she no longer had to struggle getting out of her chair to do the simplest of tasks.

# Case Study Maureen Williams

“Being in my own home and having my independence is important to me. With the evoassist, controlling my home is easier than I ever thought it would be.”

## The story

Young at heart, Maureen was looking forward to spending her retirement years taking up new hobbies and enjoying time with her grandchildren. Sadly, Maureen's health quickly deteriorated and her arthritis got progressively worse over the years.

Still living in her own home, Maureen was facing daily challenges when wanting to complete the simplest of tasks. Her arthritis meant that getting out of her chair to turn a light on, or answer the door meant she was struggling more and more and began to feel that her house was a burden. Wanting to keep her independence and not wanting to leave the happy memories of her family home, Maureen's family helped her to get into contact with Steeper and arrange for an assessment to be carried out free of charge at her home.

## The solution

Soon after her assessment with a Steeper engineer, Maureen chose to have the Steeper evoassist application installed. evoassist is an innovative application that transforms an iPhone, iPod touch or iPad into a universal environmental control device. Working with the latest Apple

technology, evoassist is designed to integrate seamlessly with Steeper's comprehensive range of home automation systems and return a level of independence to its users.

Maureen is now able to facilitate a large range of everyday tasks from; answering telephones and opening curtains to raising alarms and unlocking the door all from her iPhone, giving her the independence that she wanted.

## The turning point

The first time that Maureen turned the light on from her iPhone, she felt like she had been given a newfound freedom. Having the capability of controlling her own home from a device that she is already familiar with meant that Maureen has quickly and easily grasped the evoassist technology.

On reflection, she wonders how she ever coped before, “now I no longer have to worry about the little things if my arthritis is bad. I can turn the TV on, turn the light on and off and answer the door to my carer all from the comfort of my armchair.”
