

# Made to Measure Footwear Featuring QuickFit™ Lacers

**13:05 Monday 3rd October was the moment Lee proudly tried his new boots on, fastening them in seconds.**

From a young age Lee was diagnosed with Hemiplegic Cerebral Palsy. The condition means that he has a paralysis affecting his right side - he has a right leg that is shorter than the left, a plantarflexion contracture at the ankle and very limited use of his right hand. For years, Lee has used off the shelf footwear, however, he recently turned to his Orthotist Connor to help improve his gait.

Connor could immediately see that Lee would benefit from custom footwear and despite Lee's difficulty with tying laces, Lee was adamant that they would be the option for him. *"Working in an internal office delivery service in London - Velcro shoes are not appropriate for me at work. Laces look smarter and are more formal."*

Seeking a solution, Connor looked at the Click Ortho Lacing System and after discussions with the Orthotic Technicians Lee's boots were manufactured with the system in place. When Lee saw the boots he was delighted, he had a pair of boots that not only looked smart but were easy to put on and the custom fit has enabled him to improve his walking distance and speed.

## Manufacturing Process

Our Orthotic Technicians are fully adept at utilising the very latest in fastening solutions to provide shoes for individuals with complex footwear needs and specific style requirements. All of our footwear utilises the highest quality materials available and follow strict quality standards to ensure our patients receive the best product for their needs. For more information on bespoke footwear please contact [orthoticeenquiries@steepergroup.com](mailto:orthoticeenquiries@steepergroup.com).

## Features and Benefits

- Available in 4 kit sizes: X-Small, Small, Medium and Large
- Nylon-coated steel lace used for high strength and low friction
- Low-profile dial and lace guide design
- Available for UK shoe size 2-8+
- Double-cap press-fit steel rivets are easy to install using the QuickFit tool
- The easy grip Boa dial, means users can easily achieve uniform compression with a one-handed twist, adjusting the fit in seconds
